

- * Q1. Write a cpp program to accept a number and display product.
- * Q2. write a program to accept basic salary.calculate gross salary that include DA=50% of basic salary,HRA=40%.
- * Q3. Write a program to find area of a circle using object oriented programming such that the class circle must have three member functions internally namely
 - a) read() to accept radius of circle from user
 - b) compute() to calculate area of circle
 - c) display() to display the area of circle
- * Q4. Write C++ program to declare a class mobile having data members price and model number. Accept & display data for 10 objects.
- * Q5. Write a program to declare a class 'staff' having data member as name and department. Accept this data for 10 staff and display names of staff that are CM department.
- * Q6 Write a program to find area of a circle using object oriented programming such that the class circle must have three member functions externally namely
 - a) read() to accept radius of circle from user
 - b) compute() to calculate area of circle
 - c) display() to display the area of circle
- * Q7 Write a C++ program to define a class Vehicle with data members modelName, company and mileage.define as inline member function to Accept data for five objects from the user. Display the modelName, company of the vehicle having the mileage above 80.
- * Q8 Explain the Four Pillars of OOPs in details.
- * Q9 Explain the class and object in details.
