

- * Q1. Write a cpp program define class laptop having data members serialno, brand ram , storage , price accept data/ innitilize the data from constructor and display the record.
- * Q2. Write a C++ program to create a class Rectangle with data members length and breadth. Use a parameterized constructor to initialize the values and calculate the area.
- * Q3. Write a C++ program, to declare a class distance having data members km, meter, cm, mm. Accept and display data for one object using constructor concept.
- * Q4. Write a C++ program to create a BankAccount class with constructor and destructor.
- * Q5. define the constructor and constructor and write down the properties of constructor and destructor
- * Q6 Define the Friend function and syntax. Explain all properties of friend function in details.
- * Q7. Create a class Number with a private data member num. Create two objects and use a friend function to find and display the greater number.
- * Q8 Write a C++ program with three classes BankSBI and BankHDFC, BankIDBI Store the account balance in each class as private data.
Use a friend function to calculate the total balance.
- * Q9 Write a C++ program with two classes Theory and Practical. Store marks in private data members. Use a friend function to calculate total marks.
